PROFESSIONAL SUMMARY

Software Developer (B.Tech CSE, 2025) with 6+ months of experience developing enterprise business applications using C#, .NET and SQL Server. Built WPF/WinForms configuration and scheduling consoles for restaurant operations platforms, with hands-on REST API integration, workflow automation, scheduler jobs, and end-to-end debugging across application, API and database layers. Seeking an ASP.NET / Python / Software Developer role.

TECHNICAL SKILLS

Languages: C#, SQL, Python, C++, Dart

Backend & Desktop: ASP.NET, ASP.NET Web API, REST APIs, Web Services, JSON, Authentication, IIS, WPF, WinForms

Database: SQL Server, SSMS, SQL Queries, Schema Validation, Data Validation

Concepts: Workflow Automation, Background Jobs, Scheduling, Business Logic, Debugging & Troubleshooting

Tools: Git, GitHub, Visual Studio, VS Code

PROFESSIONAL EXPERIENCE

Software Developer

Mar 2026 – Oct 2026

[Zigbill Software Solutions] | Kerala, India

- Developed configuration and scheduling consoles in WinForms and migrated them to WPF for two enterprise restaurant platforms: a Process app (Service Requests) for senior management and an SOP app for staff and manager task management.
- Contributed to Process app features including Service Request, category and stage configuration, and user assignment business logic.
- Built and integrated REST APIs with client applications: authentication, JSON request/response handling and model mapping; resolved HTTPS, token and cloud/local connectivity issues.
- Wrote and validated SQL Server queries, modified schemas and troubleshoot data issues across schedules, requests, users and notifications using SSMS.
- Implemented a background scheduler job to automate Service Request generation with recurrence validation and duplicate prevention; debugged and fixed schedule failures using logging and SQL checks.

Python Full Stack Developer Trainee

Jul 2025 – Feb 2026

Techolas Technologies, Kochi

- Completed a 6-month offline Python Full Stack Development program covering front-end and back-end web application development with Python.

Software Development Intern

Jan 2025 – Apr 2025

Techgentsia Software Technologies, Infopark, Cherthala

- Trained a custom YOLOv8 model for number plate detection and built the detection pipeline with Python, OpenCV and PyTorch.

KEY PROJECTS

Process (Works) App – Configuration & Scheduling Console

C#, WPF, WinForms, SQL Server

- Admin console to configure Service Requests, categories, stages and user assignment for a restaurant process app used by senior management; built in WinForms and migrated to WPF.

SOP Platform – Configuration & Scheduling Console

C#, WPF, WinForms, JSON

- Console to configure SOP tasks and schedules (daily to yearly) with date/time validation, exceptions and stage-to-user assignment via DataGridView; schedules stored as JSON.

Automated Service Request Scheduler

C#, SQL Server, Background Job

- Scheduled job that evaluates schedules and auto-generates Service Requests with SR sequencing, user assignment, execution history and logging.

KPI API Integration & QR/PDF Generator

C#, REST API, JSON

- Integrated KPI APIs with client applications and built a module that generates QR codes and PDF documents from application data.

Expense Tracker App

Flutter, Dart

- Cross-platform expense tracking app with Material Design 3 and dynamic light/dark themes.

EDUCATION

B.Tech in Computer Science | APJ Abdul Kalam University

May 2025

CGPA: 7.65

CERTIFICATIONS

- IBM SkillsBuild: Become an AI Agent Architect
